January 25, 2013

Introduction

By a Notice issued October 19, 2012 the New York State Public Service Commission (“PSC” or “Commission”), requests public comment on certain issues associated with the status and development of residential and small non-residential retail energy markets in New York. In this Notice the Commission identified specific questions to which interested persons are invited to address. While Comments were originally requested by December 27, 2012, a subsequent notice was issued to extend the deadline for Comments to January 25, 2013 and Reply Comments to February 8, 2013.

The Public Utility Law Project of New York, Inc. (“PULP”) and AARP welcome the opportunity to submit these comments in response to the Notice. PULP represents the interests of low and fixed income utility consumers in matters affecting universal service, affordability and consumer protection. AARP is a nonpartisan, nonprofit social welfare organization with a membership that helps people 50+ have independence, choice and control in ways that are beneficial and affordable to them and society as a whole. AARP is an advocate nationwide for the rights of people aged 50 and older. A substantial percentage of AARP’s members live on fixed or limited incomes. A major priority for AARP is to protect consumers from utility expenses that may endanger their health and financial security.

In preparing these comments we have been assisted by Barbara R. Alexander, Consumer Affairs Consultant,¹ who has a national practice on consumer protection regulation of alternative energy suppliers.

¹ Ms. Alexander’s expertise in this area is a reflection of over 30 years of professional experience in consumer protection policies and programs, both with respect to consumer credit transactions, public utility regulatory policies, and regulation of retail competitive markets. Since 1996, Ms. Alexander has appeared in over 15 state jurisdictions in the U.S. and Canada on consumer protection, customer service, and low income policies and programs related to the development of retail competitive markets. At the onset of the development of the retail energy markets

Electric and natural gas services are essential for residential customers. New York's residential electric and natural gas customers annually spend more than ten billion dollars for these utility services, which are essential to their lives, their homes and families. Many consumers live on fixed incomes or are poor., and many are vulnerable because of advanced age, medical needs, mental limitations or lack of literacy in English.² The lack of affordable energy services for these households is a significant contributor to adverse impacts on household health and safety.³ Care must be taken not to confuse or disadvantage customers who can ill afford costly mistakes in their home energy decisions.

The overwhelming majority of New York's utility customers has chosen to remain with traditional utilities and has opted not to take service from ESCOs. After years of promotional efforts, the statewide migration rate for residential electric customers is 22.5% as of May 2012, the month for which the most recent information is available. This level of customer migration has not changed significantly in recent years, an increase of only 3.2% since December 2010. A similar trend is evident for natural gas migration rates even though the ability to select an alternative supplier has existed for over a decade. As of April 2012, the month for which the most recent information is available, 20.1% of New York's residential natural gas customers are served by an ESCO. As a result, it remains vital that the Commission ensure that the default commodity service provided by both gas and electric distribution utilities is procured pursuant to policies that

she prepared a guide to the development of consumer protection programs and policies applicable to retail energy suppliers that was published by the U. S. Department of Energy. Ms. Alexander has represented national consumer organizations, such as AARP, and state public advocates in the development of retail market regulations, including licensing, customer disclosures, contract term regulation, and enforcement policies applicable to retail natural gas and electric suppliers. In addition, she has appeared as an expert witness on behalf of advocates and regulatory commission staff in the investigation of specific supplier marketing and customer service conduct in Illinois (Just Energy, formerly U.S. Savings Corp.) and Delaware (Horizon Power & Light), as well as pending and recently completed reforms of retail market regulations in Ohio, Delaware and Pennsylvania.

² Of New York State's 72 million households, 14.5% have incomes below the federal poverty level. Of the state's 19.4 million population, 13.7% are over 65 years of age, 21.8% are foreign born, and languages other than English are spoken in 29.5% of homes. U.S. Census Bureau, State and County Quick Facts, available at <http://quickfacts.census.gov/qfd/states/36000.html>.

reflect the need for stable and lowest cost essential natural gas and electric service for the vast majority of customers.

The recent evidence regarding the pricing of ESCO services should raise serious concerns about the value of restructuring and retail competition in New York. Despite millions of ratepayer dollars spent on inducing customers to switch to ESCOs, there has been no proceeding to find out whether customers who switched to ESCOs fared better in comparison to those who receive traditional service. In fact, there is growing evidence that many residential customers pay more for essential electricity and natural gas service compared to utility generation supply procured through competitive mechanisms in the wholesale market in several states.

In New York, the Public Utility Law Project recently obtained data from Niagara Mohawk (a National Grid affiliate in upstate New York) that documented that between August 2010 and July 2012, 84 % of the electric bills and 92 % of the gas bills of those who switched to alternative suppliers were higher than the bills of those who decided to keep getting their supply from National Grid. And those statistics translated into huge disparities in consumer bills. For instance, the data showed that over that 24-month period, those with higher bills paid nearly \$500 more for electricity and \$260 for natural gas.⁴ In total, residential ESCO customers paid approximately \$130 million more for 24 months of service than they would have paid had they not switched to ESCO service and instead received full service from the traditional utility. A similar study of PPL Electric low income customers served by electric suppliers in Pennsylvania resulted in the same unfortunate finding—over 70% were paying more than the PPL Electric default service price at the time of the evaluation.⁵

⁴ Direct Testimony of William D. Yates, C.P.A., on behalf of the Public Utility Law Project of New York, Inc., before the New York Public Service Commission, Proceeding for Niagara Mohawk Power Co. for natural gas and electric rates, Case No. 12-G-0202 and Case No. 12-E-0201 (August 31, 2012). A copy of Mr. Yates' Testimony is attached to these comments as Attachment 1.

⁵ Direct Testimony of Stephen Krone, on behalf of Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania, before the Pennsylvania Public Utility Commission, Petition of PPL Electric Utilities Corporation for Approval of a Default Service Program and Procurement Plan for the period of June 1, 2013 through

The Citizens Utility Board in Illinois has published an evaluation of alternative natural gas prices charged to customers compared to utility natural gas supply service in its Gas Market Monitor. Based on an analysis of how natural gas supplier plans have actually impacted customer bills since 2003, 94% of the supplier plans have resulted in higher prices for residential customers compared to default service. The average customer loss is \$1,202.00.⁶ This trend has been evident for many years and for almost all suppliers.

In Ohio, data submitted by the Ohio Partners for Affordable Energy in two recent natural gas dockets clearly demonstrates that the bulk of competitive natural gas supplier offers are higher in price than standard service and standard choice offers.⁷ Data provided by Columbia Gas of Ohio makes clear that customers purchasing commodity natural gas from unregulated suppliers have paid over \$861 million since the advent of CHOICE.⁸ In the most recent six months for which data is available, Ohio customers served by marketers have paid \$37 million more, and that figure does not include any winter heating months.⁹

Clearly, customer education concerning shopping and entering the retail market must include more than the notion that “savings” are likely to result. Furthermore, such evidence suggests that the continued effort to promote a retail competitive market for essential electricity and natural gas service for residential customers may not be a worthy policy goal. Allowing

May 31, 2015, Docket No. P-2012-2302074 (July 20, 2012). According to the information provided by PPL in discovery, more than 73% of its low income customers enrolled in PPL’s low income benefit program who were currently being served by an Electric Supplier were being charged a higher price than PPL’s price to compare.

⁹ Id.

customers to select alternative energy providers should not come at the expense of exposing customers to higher energy prices when that is not what the customer has bargained for or had been led to believe will occur. Reforms proposed in this proceeding, while valuable, will not substitute for a realistic view of the energy market structure itself and the value that may or may not result from continued efforts to promote migration and customer selection of an ESCO.

The following comments are provided in response to the issues and questions identified by the Commission in this proceeding:

Information for Current ESCO Customers¹ –

- 1. What are the benefits and costs of requiring that utilities develop and make available historic bill calculators through utility websites and/or smart phones to enable ESCO customers to compare their actual charges to what they would have paid if they were a full-service utility customer? How should such tools be designed so that they are easy to use, factually oriented, and produce accurate and useful information for ESCO customers?**

RESPONSE: PULP and AARP support the development of bill calculators and the widespread access to such information by utilities on their websites and other internet-based functions and programs. The presentation of this information does not appear to be expensive based on the information provided by Niagara Mohawk (National Grid) in its pending rate case and several New York utilities already offer this function to ESCO customers only.¹⁰ Access to the website utility bill calculators should not be restricted to those who have previously switched to ESCO service.¹¹ These calculators should focus on the generation or competitive portion of the utility bill and ensure that customers are not confused between the “regulated” distribution charges and those “competitive” charges offered by ESCOs and reflected in the utility’s Price to Compare for generation supply service. Furthermore, even a generalized calculation that compares historical monthly average residential costs at various common usage levels by the

¹⁰ See, e.g., the bill calculator offered by National Fuel Gas Distribution Corp. on its website, <https://acctsvcs.nationalfuelgas.com/HistRateCompUnauth.aspx>

¹¹ Calculators may be helpful to customers considering ESCO service who have not switched. Also, bill calculators could help customers check what a utility would charge when considering a move across service areas, could enable submetered tenants to compare their landlord’s bills with what the utility would charge, and enable buyers and sellers to estimate partial month bills at closings.

utility would be helpful if a customer-specific calculation is not otherwise available. In addition to offering bill calculators on the utility's website or smart phone application, the same information should be available to customers who call the utility's call center by selecting a voice menu option and speaking with a customer service representative. AARP and PULP also recommend that the Commission's sponsored Power to Choose website highlight the availability of such bill calculators and provide a direct link to each utility's bill calculator on this website.

In addition, it is also important to acknowledge that the electric and natural gas supply portion of the customer bill for many New York utilities is not uniformly presented and the energy supply rates are subject to reconciliation and frequent changes. These policies that govern a utility's default service program should be revised to simplify and provide more stability to supply rates. If customers are confused and without sufficient information on what the utility is charging for energy supply, they are subject to the potential for misrepresentation and misleading information from ESCOs that take advantage of such lack of transparency and price stability in marketing their products.

2. What are the benefits and costs of requiring that utilities include a line item on ESCO customer bills that identifies what the customer would have paid had supply been purchased from the utility? Precisely what information should be published on the bill so that it is most useful to customers?

RESPONSE: One of the major concerns that we have encountered in our consideration of "shopping" information for residential customers is that once a customer has chosen an ESCO, the utility typically bills for the ESCO pursuant to consolidated utility billing agreements. Utilities then also collect the ESCO's commodity charges pursuant to Purchase of Receivables Programs.¹² The customer naturally views the utility's billing and collection function as "regulated" and approved by the Commission. As a result, the use of utility consolidated billing and collection for unregulated ESCO charges raises serious consumer protection concerns. The customer only sees the ESCO price or charges on their monthly bill, thus losing the ability to

¹² In the pending Niagara Mohawk case, ESCO charges for more than 99% of residential customers were purchased at a discount by Niagara Mohawk and collected from the customer as Niagara Mohawk charges.

understand how the ESCO price and charges compare to the utility's default service or Price to Compare. Furthermore, the utility seeks to terminate service for the ESCO and delivery charges if the customer fails to pay on time. As a result, if the ESCO charges are higher than what the customer would pay under the utility's default service charges, the utility (and this Commission) has created a mechanism by which the ESCO is subsidized in collection of its unregulated charges. Under a true competitive market, a retail supplier or seller is required to collect unpaid bills through the normal collection channels available to competitive businesses and is not provided with the "in terrorem" debt collection tool of utility service termination enjoyed by a monopoly service provider. The Commission should seriously consider the implications of its approved Purchase of Receivables programs in this proceeding. A major reform that would provide the most important response to the finding of higher ESCO charges compared to utility default service charges would be to prohibit the utility from terminating service for an amount that would exceed what the customer would have otherwise paid for utility commodity service and require any ESCO to collect any of its contract charges in excess of this amount through normal debt collection channels, but not termination of service by the utility.¹³

While the bill calculator initiative would certainly allow the customer who knows about this function and chooses to insert the required data to obtain an historical comparative view, the lack of any information on the monthly bill itself means that customers do not even know whether there is any reason to seek information about comparative prices. Also, many people in New York State do not use the internet.¹⁴ Accordingly, the utility's monthly bill should provide either the applicable Price to Compare or contain a conspicuous notice that customers can compare their ESCO price to the utility's Price to Compare by accessing a specific website or accessing the utility's customer call center. The Commission should recognize that the utility's call center can provide the same information as the utility's website and may be more accessible to many customers.

¹³ This concept is analogous to the provisions of Public Service Law § 32.5 and Section 11.9-B(f) of the Commission's regulations regarding restoration of service after suspension of distribution service at the instance of an unpaid ESCO whose receivables have not been purchased by the distribution utility. To regain service, the customer is required only to pay (or make arrangements to pay through a deferred payment agreement) an amount "equal to or greater than the amount such customer would have paid if the entire utility service had been obtained from the utility providing distribution services during such period." PSL § 32.5(d). It makes little sense to allow the utility to threaten shutoff for more than is required to reinstate service after shutoff, or to allow circumvention of the principle through the purchase of ESCO receivables that morph into charges of the distribution utility.

¹⁴ Approximately 20.7% of New York households indicate no internet usage. U.S. Census Bureau, Current Population Survey 2012, Table 1156. Household Internet Usage In and Outside of the Home by State: 2010.

3. What are the benefits and costs of requiring that utilities explain to payment-troubled ESCO customers contacting the utility, or provide to such customers in a subsequent mailing, what the customer would have paid had the energy supply been purchased from the utility, and the difference between that amount and what they were actually billed for energy supplied by the ESCO? What information should utilities provide to existing low- income and payment-troubled ESCO customers to assist them in making informed decisions and how should utilities provide that information?

RESPONSE: While low income and payment troubled customers are more likely than others to experience hardship and adverse consequences if they select an ESCO that results in higher bills,¹⁵ all customers deserve access to information and education about how to use information about ESCO prices as compared to energy supply purchased from the utility. Furthermore, it is unreasonable to expect that utilities take on the obligation to “inform” customers about ESCO pricing other than through competitively-neutral bill calculators and standardized advice about how to compare prices and referring customers to the Power to Choose website. Most utilities already have a website section that explains customer choice, provides information on how to compare prices, and provide standardized Frequently Asked Questions about shopping and retail competition.

AARP and PULP recommend that the Commission stop promoting customer choice as primarily a means to “save” on the customer’s bill¹⁶ and undertaken proactive steps to monitor ESCO marketing and contract behaviors. Our comments below describe a more proactive monitoring and enforcement program concerning ESCO marketing and contract terms .

AAARP and PULP do not agree with the notion that only disclosure of historical bill comparison information is a sufficient protection for low income and payment troubled customers or that the utility’s customer education targeted to such customers is sufficient. The Commission should consider more substantive policies with regard to identified low-income customers, such as those who have received LIHEAP in the last year and/or those enrolled in the

¹⁵ In the pending Niagara Mohawk case, discovery indicated that a disproportionately high number of final termination notices, approximately 30,000 of 90,000 in a month, were sent to ESCO customers.

¹⁶ The Commission’s website lists “savings” as the first aspect of retail competition in its explanation to customers of this program. See, <http://www.dps.ny.gov/energychoices.htm>

utility's low income programs. See Response to Question 7.

Data for Potential Customers

- 4 . What are the reasons why the Commission should, or should not, collect monthly data on prices charged by ESCOs to residential and small non-residential customers for all or some of their products? How would Commission publication of all or part of this data assist customers and/or impact retail competition? What level of data aggregation would be sufficient to adequately address the need to maintain the confidentiality of customer-specific data?**

RESPONSE: The Commission should either directly or through contract authorize a third party to collect and publish ESCO pricing data for every pricing plan offered to New York residential customers. Similar to the project undertaken by the Citizens Utility Board in Illinois, such a public presentation of ESCO prices and how those prices have compared over time to utility energy supply rates would be a valuable public resource. ESCOs should be required by order to timely and accurately report their current pricing programs and any price changes.¹⁷

- 5 . What are the advantages and disadvantages of requiring ESCOs to honor rates and terms posted on the Commission's "Power to Choose" website? What are the benefits and costs of requiring that ESCOs post all of their offerings on that website? What other enhancements to the site should be considered to increase its usefulness to consumers?**

RESPONSE: An ESCO that submits prices and terms for the Power to Choose website should be required to actually offer those prices and terms to any customer upon request for a minimum

¹⁷ Under current orders, ESCOs need only report on the 5th of each month what their prices were on the 1st and are not required to report changes. As a consequence, the ESCO pricing information at the PSC website is inherently unreliable.

period of time. This website should also include all the products and services offered by the ESCO to residential customers. An ESCO that submits prices and terms to the Power to Choose website and then fails to actually market or offer this product to New York customers should be investigated for deceptive advertising and marketing.

ESCO Referral Programs

- 6. What is the basis for continuing the existing ESCO Referral Programs in the service territories of Con Edison, Orange & Rockland, Central Hudson, and National Grid (upstate)? If these programs should continue, should they be modified, and how long should they be maintained?**

RESPONSE: AARP and PULP recommend that the Commission eliminate the current Referral programs. First, they have operated for several years and customers are aware of the option to choose an ESCO. Second, most of the current programs are designed with serious flaws. The customer should not be marketed a program that appears to assure “savings” compared to the utility’s default commodity price for a short period of time because the customer is led to expect that such savings are typical of ESCO offers generally. The Referral programs that provide “teaser” rates that are then followed by prices that may or may not provide any savings to customers as well as the ability of the ESCO to capture these customers based on the customer’s silence that has contributed to some of the marketer abuses and higher prices that customers simply do not understand. Utilities should be required to affirmatively inform new and moving customers of their option to select an ESCO and refer customers to the Power to Choose website for current ESCO offers. Those ESCOs that care to offer new customers a discount can do so through their own promotional efforts and report the prices and offers at the Power to Choose website.

Low Income Customers

- 7. What are the advantages and disadvantages of allowing customers participating in any state or federal energy assistance program, such as the Home Energy Assistance Program, or in any utility-sponsored affordability program, to obtain commodity service from an ESCO? How does the analysis change if the ESCO guarantees a price no higher than that charged**

by the utility?

RESPONSE: First, the Commission should consider at least a temporary moratorium on allowing low income customers who have received LIHEAP in the last year or that are enrolled in the utility's low income programs to enroll in any ESCO program while this investigation is pending.

Second, low-income customers generally need the lowest price commodity service. It is unreasonable for this Commission to approve discounts and reduced rates for low income customer classes, shift responsibility for the foregone revenue to all other customers, but then allow ESCOs to charge higher rates that result in unaffordable or higher bills, thus contributing to the higher collection costs to all customers and adverse health and safety impacts on the low income households. An assurance that low-income customers would not pay more if they switch to an ESCO would help ensure that the intended benefits of LIHEAP and low income rates actually have the intended effect of reducing energy burdens.

Door-to-Door Marketing

8. What are the legal and policy reasons for permitting or prohibiting door-to-door marketing of electricity and/or natural gas to residential and/or small non-residential customers?

RESPONSE: Many states have confronted a burgeoning number of complaints concerning door-to-door marketing and telemarketing of natural gas and electricity services by suppliers. These marketing channels result in a one-on-one interaction with the customer at a private home and carry a long history of abuses.¹⁸ There are several reasons why door to door and telemarketing gives rise to the potential for abusive and deceptive marketing. First, the salesperson is typically not an employee of the supplier, but an independent agent compensated based on a successful sale and so has the natural incentive to use strong sales techniques to achieve this objective. Second, the customer is marketed with oral statements and information

¹⁸ Several marketers in other states have specialized in door-to-door sales to residential customers and have been the subject of investigation, fines, and license revocation, e.g., Georgia, Pennsylvania, Michigan, New Jersey, and Ohio. The history of the door-to-door sales technique is replete with consumer fraud and unfair sales techniques. See, International Society for Krishna Consciousness v. Lee, 505 U.S. 672, 112 S.Ct.2701, 2722, 120 L.Ed.2d 541 (1992) (Kennedy, J., concurring).

that may and, based on experience, often is contradicted by the large and small print of the actual agreement. These oral representations are not recorded, but customers rely on those statements and often view the verification statements as a formality. While the written agreement may not promise savings, the oral representations and statements by the salesperson may be designed to imply or promise such a result. Third, the customer is typically not as knowledgeable about competitive energy markets, the role of the utility and its Price to Compare, and is often misled, either deliberately or not, that the person at the door has some type of official status, either from the utility or a government agency. Furthermore, customers are sometimes misinformed that there is a looming deadline for making a decision, implying or deliberately misleading the customer into thinking that the utility's role in supplying power supply is temporary or about to end. Finally, door to door marketers often target lower income, elderly, non-English speaking, or disabled or frail individuals as a result of the neighborhoods that are targeted for this type of marketing and/or the fact that these are the folks who are home during the hours typical for door to door marketing activities.

While AARP and PULP agree that many marketing abuses and deceptive marketer behavior occurs with door-to-door marketing, the Commission should consider broader and more sweeping reforms in its approach to monitoring and regulating ESCO activity.

The following key areas require reforms and the development of improved consumer protections in New York:

- A. Licensing/Certification.** The intent of the certification process should be to ensure that the supplier has the necessary managerial, financial, and technical expertise to allow it to market to residential customers and enforce its contract terms. However, the purpose of this process is not only to require the supplier to check off certain boxes, file required forms, and submit a modest security or retainer. It is vital that the Commission act as a gatekeeper to prevent suppliers that have a history of investigations and adverse activities in other states from operating in New York. While most commissions are reluctant to prevent suppliers from entering the competitive market, fearing that they will be viewed as adverse to the creation of a retail market, the fact remains that the certification and licensing process must be viewed with a serious intent to prevent bad actors or those without sufficient resources and expertise from entering the New York retail market. The failure to undertake this duty in a proactive manner risks serious harm to consumers and the potential that the Commission will need to undertake

expensive and time consuming activities to remove the offending supplier from the market and make consumers whole, a result that unfortunately rarely occurs without economic loss to consumers. As a result, the Commission should ensure that its certification review process keeps pace with the surge in supplier activities in other states and carefully reviews the background and qualifications of not only the corporate entity that has applied, but the background and experiences of key directors and managers in other retail market entities in other states.

B. Disclosures. In a competitive market the role of disclosures is crucial in the absence of regulation of prices and terms of service. This hallmark of consumer protection regulation has been recognized in state and federal consumer credit transactions (e.g., Truth in Lending Act), and in numerous retail consumer sales transactions (e.g., the sale of used cars, personal insurance). The same criteria that led to those typical disclosure laws and regulations are applicable to the retail sale of electricity and natural gas supply. Energy suppliers are in the business of making a sale to earn a profit and are motivated to maximize that profit. Residential and small commercial customers who are used to standard utility prices and terms and conditions that cannot be changed on a whim are ill equipped to understand and compare the many pricing and contract term options offered by the suppliers; this describes the position of the vast majority of New York utility customers, a great many of whom have chosen not to take service from an ESCO, preferring to be served at prices established through price setting methodologies and hedging practices approved by the Commission. . While the cents per therm or the cents per kWh may be the focal point of most educational activity (such as the Commission's Power to Choose price comparison charts) and a component of the supplier's marketing materials, there are other key components relating to the price and other terms and conditions that can and do have a significant impact on the customer's bill and the cost of energy services. The Commission's regulations should reflect the need for disclosures that reflect all fixed, variable, and recurring charges in a uniform manner that allows for reasonable comparisons and educational messages. Further, other contract terms must be highlighted, such as non-recurring fees (deposits, late fees, early termination fees) in a manner that allows the prospective customer to compare the essential contract terms among suppliers. This type of regulatory tool is particularly important for supervision of door to door sales and telemarketing sales of energy supply

because the customer is naturally incited to rely on the salesperson's statements about the contract terms as opposed to the written contract terms that may contain fine print and that the salesperson may deliberately fail to orally disclose. There is a potential for adverse impact given the disparity between the written contract terms and the oral representations and sales messages when a transaction is conducted in person or over the phone. But it must be emphasized that the typical customer's reliance on what is said in person far outweighs any written disclosures or written terms of service in motivation of a sales transaction, a phenomenon that marketers rely upon in using these sales channels.

C. Regulation of Contract Terms. While typically not widely understood, the regulation and potential prohibition of certain contract terms and marketer conduct is an essential tool for the regulation of a competitive market. For example, the Truth in Lending Act (and many similar state consumer credit protection laws), Fair Credit Reporting Act and the Fair Debt Collection Practices Act all prohibit certain conduct and contract terms that are viewed as unconscionable or unfair, even if accompanied by disclosure. This type of regulation is particularly important for the retail energy market due to the significant need for affordable energy services and the implications for health and safety if these services are not available at a reasonable price and reasonable terms. The Commission should proactively review contract terms of ESCOs that generate significantly higher complaint levels. The state's retail regulation of energy markets confronts the need for this approach when dealing with the regulation of variable rate contract terms, contract renewal policies, early termination fees, and other terms that may tilt the bargain so far into the supplier's favor that they should be deemed unreasonable and prohibited. Another area in which such regulation is typical relates to the oversight of door-to-door and telemarketing activities by suppliers, an area in which several states have taken remedial action that should be emulated by this Commission.

D. Customer Education. The Commission's educational activities should not promote or suggest that savings will result from choosing an ESCO. Promises of savings are not always accurate for a number of reasons:

- a. First, some suppliers emphasize the fixed cents per kWh or cents per therm price but fail to also conspicuously point out that the contract calls for a fixed monthly fee in addition to the kWh or per therm rate or the supplier's contract calls for

other non-recurring charges or fees that are imposed for activities that customers normally do not experience with regulated utility service. As a result, the actual monthly price for supply service is higher than the multiplication of the kWhs or therms by the advertised fixed price. To focus customer education on the fixed or initial price per kWh or per therm is misleading.

- b. Second, some suppliers price their product with a “teaser” rate that is in effect for several months, followed by a methodology to establish a price for the remaining contract term that may then result in a rate considerably higher than advertised. The Commission should investigate whether ESCOs regularly publish low first-of-the-month rates at the Power to Choose website while actually charging higher rates at most other times.
- c. Third, variable rate contracts may rely on a methodology that changes prices in a way that is not transparent to the customer and that causes higher prices during the contract term compared to a standard service offer.
- d. Fourth, once a supplier has a customer, the supplier may include a contract term that allows automatic renewal so that silence from the customer when new terms are presented is treated as acceptance. Again, the supplier’s renewal price may be higher than the current standard service offer or other competitive options, a comparison that is not evident on the customer’s bill.
- e. Finally, some suppliers offer attributes for their products, such as “peace of mind” for long term fixed rate or variable rate prices, or “green” power, that result in prices higher than the default service. Since this Commission has ordered utilities to adopt very volatile default service pricing mechanisms, ESCOs can market their fixed price products as a means to avoid price volatility. AARP and PULP strongly oppose the Commission’s policies concerning volatile and rapidly changing default service procurement.

With regard to door-to-door marketing consumer protections, AARP and PULP recommend that the Commission consider the following best practices at a minimum. The Pennsylvania PUC in revised customer protection regulations recently adopted

many of these reforms.¹⁹

- Suppliers should be required to develop and implement standards and qualifications for employees and agents engaged to interact with retail customers, and document that it has procedures in place to prevent the hiring or engagement of individuals that do not meet these standards;
- A supplier should be explicitly prohibited from hiring or allowing any agent to represent it unless it has conducted a criminal background check on the individual obtained from the appropriate New York authorities and any other state in which the individual has resided in the last 12 months. Suppliers should be required to conduct such background checks on existing employees or agents within six months of the effective date of the regulations. This background check should include, but not be limited, to any sex offender database maintained by the State.
- Suppliers should be explicitly prohibited from retaining, hiring or engaging any employee or agent who was convicted of a felony or misdemeanor when the conviction reflects adversely on the person's suitability for such employment.
- A supplier shall ensure the training of its agents on the following subjects:
 - (1) State and Federal laws and regulations that govern marketing, telemarketing, consumer protection and door-to-door sales, including New York consumer protection laws and regulations.
 - (2) Responsible and ethical sales practices as described in these regulations.
 - (3) The supplier's products and services.
 - (4) The supplier's rates, rate structures and payment options.
 - (5) The customer's right to rescind and cancel contracts.
 - (6) The applicability of an early termination fee for contract cancellation when the supplier has one.
 - (7) The necessity of adhering to the script and knowledge of the contents of the script if one is used.
 - (8) The proper completion of transaction documents.
 - (9) The supplier's disclosure statement.
 - (10) Terms and definitions related to energy supply, transmission and distribution service.
 - (11) Information about how customers may contact the supplier to obtain information about billing, disputes and complaints.
 - (12) The confidentiality and protection of customer information and the regulations relating to standards of conduct and disclosure for licensees and standards of conduct and disclosure for licensees.
- Suppliers should be required to document the training of an agent and maintain a record of the training for 3 years from the date the training was completed.

¹⁹ Pennsylvania PUC, Final Order, Docket No. L-2010-2208332 (October 27, 2012).

- Suppliers should be required to make training materials and training records available to the Commission upon request, as well as evidence that the training materials and records have resulted in reasonable management oversight to implement the training requirements.
- Suppliers should be required to monitor a representative sample of telephonic and door-to-door marketing and sales calls to: (1) Evaluate the supplier's training program; (2) Ensure that agents are providing accurate and complete information, complying with applicable rules and regulations and providing courteous service to customers.
- Suppliers should be required to develop and implement a disciplinary program to ensure compliance with its training programs and these regulations and document that such disciplinary program has been implemented to prevent violations and internal management failures.
- Suppliers must issue an identification badge to employees or agents that interact with consumers in door to door sales or public events. The badge must:
 - (1) Accurately identify the supplier, its trade name and logo.
 - (2) Display the agent's photograph.
 - (3) Display the agent's full name .
 - (4) Be prominently displayed.
 - (5) Display a customer-service phone number for the supplier.
- Suppliers should be required to affirmatively identify the name of the Supplier that he represents and affirmatively state that he is not working for and is independent of the customer's local distribution company or other supplier. This requirement shall be fulfilled by both an oral statement by the agent and by written material provided by the agent.
- When conducting door-to door activities or appearing at a public event, an agent should be prohibited from wearing apparel or accessories or carry equipment that contains branding elements, including a logo, suggests a relationship that does not exist with any distribution utility, government agency or another supplier.
- A supplier should not be able to use the name, bills, marketing materials or consumer education materials of another supplier, distribution utility, or government agency in a way that suggests a relationship that does not exist.
- A supplier or supplier agent may not say or suggest to a customer that utility customers are required to choose a competitive energy supplier.
- Door to door sales should comply with local ordinances regarding door to door marketing and sales activities.
- Door to door sales should only occur during the hours between 9 a.m. and 7 p.m. during the 6 months beginning October 1 and ending March 31, and to the hours between 9 a.m. and 8 p.m. during the months beginning April 1 and ending September 30. When a local ordinance has stricter limitations, a supplier shall comply with the local ordinance.

- When regard specifically to door-to-door sales or telemarketing marketing activities, an agent should be required to comply with the following:
 - (1) After greeting the customer, the agent shall immediately identify himself by name, the supplier the agent represents and the reason for the visit. The agent shall state that he is not working for and is independent of the local distribution company or another supplier.
 - (2) The agent shall offer a business card or other material that lists the agent's name, identification number and title and the supplier's name and contact information, including telephone number. This information does not need to be preprinted on the material. When the information is handwritten, it shall be printed and legible.
- When a customer's language skills are insufficient to allow the customer to understand and respond to the information being conveyed by the agent, or when the customer or a third party informs the agent of this circumstance, the agent shall terminate contact with the customer.
- When an agent completes a transaction with a customer, the agent shall:
 - (1) Provide a copy of each document that the customer signed or initialed relating to the transaction. A copy of these documents shall be provided to the customer before the agent leaves the customer's residence. If requested by the customer, a copy of the materials used by the agent during the call shall be provided to the customer as soon as practical.
 - (2) Explain the supplier's verification process to the customer
 - (3) State that the supplier shall send a copy of the disclosure statement about the service to the customer after the transaction has been verified if the disclosure statement has not been previously provided.
 - (4) State that the customer may rescind the transaction within seven business days after receiving the disclosure statement.
- An agent shall immediately leave a residence when requested to do so by a customer or the owner or an occupant of the premises or if the customer expresses no interest in what the agent is attempting to sell.
- A supplier shall comply with an individual's request to be exempted from door-to-door marketing and sales contacts and annotate its existing marketing or sales databases consistent with this request within 2 business days of the individual's request.

9. What are the reasons why the Commission should continue to permit termination fees in sales contracts made between ESCOs and residential and small non-residential customers through the door-to-door marketing channel? Are there circumstances under which termination fees for such contracts would be appropriate (e. g., fixed-rate contracts), and what should an ESCO be required to

demonstrate to be able to include termination fees for door-to-door marketing in its sales contract?

RESPONSE: The Commission should generally regulate early termination fees in residential customer ESCO contracts and not merely those entered into via door to door or telemarketing channels. Specifically, the Commission should reduce the currently allowed \$150 early termination fee and an ESCO should be prohibited from charging any early termination fee in excess of \$50.00. This legislative reform was recently adopted in Illinois. Ohio regulates the amount of early termination fees based on the length and type of contract. The Commission should impose this consumer protection as a condition of its licensing or certification process.

10 . Are there other conditions or requirements that should be imposed on door-to-door marketing by ESCOs, such as a requirement that such marketers begin an interaction with a potential customer with a disclosure statement? An example of a possible disclosure statement is: “My name is _____. I represent _____. _____ can provide you with your electricity and/or natural gas. I do not work for or represent your utility.” How should such a requirement be enforced?

RESPONSE: This and other important reforms relating to door to door marketing are discussed in our response to Question 8.

11 . Should the Commission have the authority to preclude or limit an ESCO’s door-to-door marketing in the future in specific circumstances?

RESPONSE: The Commission should generally take a more proactive and resource intensive oversight and enforcement role with regard to ESCO marketing and contract behaviors. Among the enforcement remedies that the Commission should adopt orders requiring adherence to marketing standards as a condition of eligibility to market electricity and gas, and implement them as necessary, through the rescission of any authority to market to customers in New York, ordering recompense to customers where misleading and

unlawful behavior has occurred, assessing civil penalties for violation of orders or regulations, and adopt conditions to any license or certificate that might include a prohibition on a particular marketing channel that the ESCO has abused. The following regulations adopted by the Maine Public Utility Commission reflect reasonable licensing and enforcement authority that the Commission should adopt:

Maine PUC, Chapter 305²⁰

§ 3 SANCTIONS AND ENFORCEMENT

A. Sanctions

Competitive electricity providers are subject to sanctions for violations of applicable provisions of Chapter 32 of Title 35-A, and Commission rules or orders. Sanctions may be imposed following a hearing before the Commission in conformance with 5 M.R.S.A. Chapter 375, subchapter IV (Maine Administrative Procedures Act) and Chapter 110 of the Commission's rules. The following sanctions may be imposed:

1. Penalties

In an adjudicatory proceeding, the Commission may impose a penalty not to exceed \$5,000 for each violation for each day that the violation persists. In determining the amount of the penalty, the Commission shall consider the magnitude of the penalty relative to the size of the competitive electricity provider's business, the nature of the violation, and the good faith attempts by the competitive electricity provider to achieve compliance after notification of a violation. Penalties collected by the Commission under this provision must be deposited in the Public Utilities Commission Reimbursement Fund.

2. Cease and Desist Orders

a. **Hearing.** The Commission may issue a cease and desist order following an adjudicatory hearing, if the Commission finds that any competitive electricity provider has engaged or is engaging in any act or practice in violation of any law or rule administered or enforced by the Commission or any lawful order issued by the Commission. A cease and desist order is effective when issued unless the order specifies a later effective date or is stayed pursuant to Title 5, section 11004; or

²⁰ CITATION

b. **Emergency.** The Commission may issue a cease and desist order in an emergency, without hearing or notice, if the Commission receives a written, verified complaint or affidavit showing that a competitive electricity provider is selling electricity to retail consumers or providing aggregator or broker services without being duly licensed or is engaging in conduct that creates an immediate danger to the public safety or is reasonably expected to cause significant, imminent and irreparable public injury. An emergency cease and desist order is effective immediately and continues in force and effect until further order of the Commission or until stayed by a court of competent jurisdiction. In a subsequent hearing, the Commission shall in a final order affirm, modify or set aside the emergency cease and desist order and may employ simultaneously or separately any other enforcement or penalty provisions available to the Commission.

3. **Restitution**

The Commission may order restitution for any party injured by a violation for which a penalty may be assessed pursuant to this subsection.

4. **Revocation; Suspension**

The Commission may revoke or suspend the license of a competitive electricity provider as stated below. At its option, the Commission may suspend only a competitive electricity provider's authority to enroll new customers.

a. For any cause for which issuance of the license could have been denied had it then existed or been known to the Commission;

b. For a violation or material noncompliance with any applicable provision of any law or rule administered or enforced by the Commission or any lawful order issued by the Commission;

c. For obtaining or attempting to obtain a license through misrepresentation, failure to disclose a material fact required to be disclosed in the application, or fraud; or

d. For the use of fraudulent, coercive, or deceptive practices, or misuse of customer funds with respect to the provision of generation service or aggregator or broker service.

5. **Other**

The Commission may impose any other sanction authorized by law that it determines appropriate taking into account the facts and circumstances that resulted in the violation.

6. **Waiver**

The Commission may waive the imposition of sanctions upon a showing that the violation was immaterial, unintentional, or that the competitive

electricity provider acted in good faith to comply with all applicable statutory and regulatory requirements.

B. Enforcement

1. Court action

The Commission through its own counsel or through the Attorney General may apply to the Superior Court of any county of the State to enforce any lawful order made or action taken by the Commission pursuant to this Chapter.

2. Notice to Attorney General

If the Commission has reason to believe that any competitive electricity provider has violated any provision of law for which criminal prosecution is provided or any antitrust law of this State or the United States, the Commission shall notify the Attorney General.

ESCO Contracts

12 . What are the advantages and disadvantages of modifying the Uniform Business Practices to require ESCOs to obtain affirmative consent from customers for contract renewals involving a change in price? What are the advantages and disadvantages of requiring ESCOs to obtain affirmative consent from customers for all contract renewals?

RESPONSE: AARP AND PULP strongly endorse a reform that would require an ESCO to obtain affirmative consent from a customer to renew a contract with any change in price or other material term. The key consumer protection issue is how or whether a supplier can interpret a customer's silence as agreement to changed terms or a renewal of an expiring contract. In general, the regulations should lean toward ensuring that affirmative customer consent is required to make a "material" change in terms of an existing contract, whether or not the original contract contained a term that allows such changes without customer consent. The term "material" should be defined at a minimum as a change in the pricing terms. First, it is unreasonable to allow suppliers to change the terms of an existing contract when that term

affects the customer's price or fees and charges without affirmative customer consent. Second, when a supplier's contract has reached the end of its stated term, the regulations should require the supplier to obtain a customer's affirmative consent to a renewal of any contract that also seeks to change the original price or related fees and charges.

Renewal of an existing contract should be allowed to occur without affirmative customer consent only if the underlying terms and price do not change or if the renewal is limited to a month-to-month contract with the original terms and no termination fee. A supplier should not be able to change a fixed price contract into a variable price contract nor alter the fixed rate without obtaining affirmative customer consent.

The basis for these proposals with regard to renewal and change of contract terms is that customers who leave the utility and agree to be served by a supplier have agreed to a certain "bargain" and have affirmatively provided evidence of such agreement in the verification process. The supplier should not be able to interpret this initial agreement to allow the supplier to change the basis of this bargain without also assuring affirmative customer consent. An agreement to become a customer is not an agreement to allow the supplier to make changes that are material to the bargain based on customer silence.

13 . What are the advantages and disadvantages of requiring ESCOs to provide their rate methodology and related billing calculations to customers with variable rate contracts? What are the advantages and disadvantages of requiring all variable rate methodologies to be based on specified formulas tied to publicly available information, with the formulas varying by ESCO? If this is to be required, when and how should ESCOs provide this information?

RESPONSE: The primary question is whether and how prospective customers in New York can obtain the material price and terms of service, including any methodology used for variable price contracts, prior to choosing an ESCO. A review of several of the ESCO websites actively marketing in New York indicates that prospective customers cannot access the material price

and terms of service disclosures prior to initiating an enrollment order and giving up the customer's personal information. As a result, customers cannot obtain any specific information about the manner in which variable prices are determined. The Power to Choose website uses the term "market conditions" to describe most of the variable rate contracts listed. As a result, AARP and PULP strongly urge the Commission to require ESCOs to make Terms of Service documents publicly available to any prospective customer and with a link to such Terms on the Commission's Power to Choose website. The Terms of Service disclosures should include the price (fixed or variable and, if variable, the specific methodology used to vary the price), the term of the contract, early termination fee, if any, late fees, additional recurring and non-recurring charges, and the billing options available to the customer.

The disclosures required for variable rate energy contracts are among the most vexing issues facing state regulators. AARP and PULP's concern is that the customer may be informed that the price will vary, but the disclosures concerning the manner or range within which the price will vary is often obscure or deliberately hidden in fine print. Some of these variable rate disclosures are incomprehensible and allow the supplier to make changes in the customer's rates without any reference to a published or external index that is not in the control of the supplier. Furthermore, a check of several ESCOs listed on the National Grid (upstate) website does not provide any specific information on how the variable rates are calculated and customers must initiate an enrollment transaction to obtain more detailed information. For Example, Energy Plus also offers a variable rate to National Grid's (upstate) residential customers. Its website (which is provided on the Commission's Power to Choose website) states, "In a variable-rate model, your supply rate is based on a variety of factors including our costs to purchase energy, applicable taxes, fees, charges, costs, expenses and margins and can change each month. As with many variable supply rate products, the supply rate may be different, including higher, than the supply rate charged by your local utility company. Because you can cancel at any time without a cancellation fee, you can evaluate your plan each month to determine whether it's working for you."²¹ Again, there is no specific information disclosed

²¹<http://www.energypluscompany.com/residential/faqs.php>

concerning the basis for changes to the variable rate other than supplier discretion and the manipulation of the rate to assure “expenses and margin (another word for “profit”).” And, as previously discussed, there is no disclosure of how the charges compare with those of Niagara Mohawk, and there is no practical way for customers to compare bills.

The regulation of variable rate contract terms may involve the need for specific regulation of both disclosure and substantive contract terms. At a minimum, we recommend that variable rate contract disclosures inform the customer of an example of how the price of their contract would have changed in the past 12-24 months if the contract had been in place with the methodology included in the supplier’s contract. Obviously, there should not be any promise that historical changes in the index or methodology will guarantee future price changes, but at least the customer will understand the nature of the variability to which he or she has agreed and see the range of change in price that has occurred in the recent past. Such a disclosure is required, for example, for variable rate mortgages under the Truth in Lending Act.²²

More importantly, variable rate contracts should be required to identify the specific index, formula, or methodology that is external to the supplier’s own manipulation or discretion to govern their terms. It is unreasonable and unfair for residential customers to be exposed to a monthly change in price for essential electricity or natural gas service based on an unidentified or unknown methodology. Whatever the methodology, index, or formula used by the supplier, it should be publicly available and external to the supplier’s ability to manipulate or interpret the index, formula, or methodology. This reform, coupled with the proposed disclosure requirement that the customer be presented with how that index, formula, or methodology has changed the underlying electricity or natural gas price in the past 12-24 months, will allow

²² Truth in Lending Act, 15 U.S.C. §1601, et seq. and its implementing Regulation Z, 12 C.F.R. Section 226. For example, for variable rate credit applications and solicitations, creditors must disclose the fact that the rate may vary and state how the rate will be determined, including identifying the index or formula and any margin or spread added to the index or formula. For introductory “teaser” rates that are temporary, the creditor must also disclose the annual percentage rate that will apply after the introductory rate expires. Special rules also govern the accuracy and currency of disclosed rates. See, e.g., 12 C.F.R. 226.5a(b)(1). Variable rate mortgages must disclose how the interest rate would change based on the prior 15-year history of the index used to trigger rate changes.

customers to make a rational and informed decision about whether a variable rate contract is appropriate for their needs.

Purchase of Receivables

14 . What would be the impact of requiring utilities to purchase receivables with recourse and thereby have ESCOs assume whole or partial responsibility for the uncollectibles of their customers? Should this be a requirement? What would be the impact of discontinuing POR without recourse for some ESCOs and how would those ESCOs be identified?

RESPONSE: The Commission's POR program and associated program rules allow the utility to bill and collect for ESCO charges that exceed what the customer would pay for utility default service.²³ At a minimum, as previously discussed, AARP and PULP recommend that utility not be allowed to threaten or to terminate service for ESCO charges that exceed the utility's default service charges. In the POR program, the ESCO charges are immediately bought by the utility, which pays the ESCO minus a discount, and bills the customer, often for more than the utility would charge for its own services. This reform would impose the obligation on the ESCO to collect charges in excess of this amount through competitive market debt collection channels and eliminate the Commission and utility's role in collecting amounts in excess of what the customer would pay for regulated default service. Such a policy would be competitively neutral in that the Commission would not be required to identify those ESCOs that would not be allowed to use the POR programs. Rather, ESCOs would self-select their ability to make use of the utility's billing and collection programs by virtue of their pricing and terms of service.

²³ While Section 32.5 of HEFPA requires the utility to reconnect service, after termination for nonpayment, based on collecting an amount that would not otherwise exceed the utility's commodity prices, the actual termination notice and threat to terminate reflect all ESCO unpaid charges. Customers are not affirmatively informed of their right to obtain reconnection by paying the lesser amount, if applicable. Furthermore, utilities seek payment arrangements on the full amount overdue and not the lesser amount, if applicable, when customers call to avoid termination for nonpayment.

Other Proposals

15. What other modifications to existing retail market programs or practices, including modifications to the UBPs, should be considered, and why?

RESPONSE: AARP AND PULP have recommended several initiatives in these comments that would greatly expand and reform the Commission's licensing and Uniform Business Practices policies. However, an additional area not otherwise addressed in the Commission's specific questions in this Notice include how the Commission itself should reform its consumer education policies and its handling of customer complaints concerning ESCOs. There will be winners and losers from competition, and customers must be made aware of that fact through effective education efforts. Commission sponsored customer education should not be promotional or ignore the realities of the marketplace.

In order to ensure the promise of competition provides for the opportunity to secure reasonable rates for consumers, supplier behaviors and contract terms that lead to unfair and unreasonably high prices should be prohibited. It is also critical that the Commission's educational and outreach programs take on a new degree of sophistication in alerting customers to supplier behaviors that lead to higher prices and educating customers to look for and consider such actions in their shopping decisions. The key to customer shopping is not merely to focus on the price, at least not the one price snapshot that is the current focus of the Power to Choose website, but should also emphasize that customer evaluation of supplier options should be more sophisticated and that poor choices result in higher prices.

AARP and PULP recommend that the Commission publish a complaint index for all active marketers on at least a quarterly basis²⁴ and take more proactive steps to

²⁴ The Illinois Commerce Commission publishes supplier complaint scorecards. See, Retail Electric Suppliers Complaint Summary, April 2012 to September 2012, <http://www.pluginillinois.org/ComplaintGrid.aspx>

initiate formal investigations and undertake enforcement and compliance actions against suppliers with above average complaint ratios and where those complaints indicate a “red flag” that suggests violation of the regulations or unfair and deceptive conduct that should be further investigated and prohibited. The Commission should also allow for public comments on customers’ experiences with individual suppliers to be published on the Commission’s website, much in the way that consumer feedback is made available through services such as “Angie’s List®”. The current regulations, even if not changed, will require a significant level of staff and enforcement resources to enable the Commission to properly supervise the compliance with its regulations and take affirmative enforcement action where appropriate. These costs should be recovered from the marketers themselves, a recognition that adequate enforcement is a cost of doing business in New York.

A review of the Commission’s website over the last two years fails to reveal any formal enforcement actions or announcements by the Commission concerning enforcement of its current regulations or orders against electric or natural gas suppliers. Other than raw numbers of complaints against ESCOs, which occur at a higher rate than for distribution utilities, there is no public information on substantive complaint trends, formal or informal investigations or other indicia of actions taken to enforce the current regulations. . There is significant “churn” in ESCO customers returning to the utility after an episode of ESCO service.²⁵ AARP and PULP believe it would be fruitful for the Commission to conduct a survey and study to find out why customers leave ESCO service and to better understand the ESCO customer experience. There is also no public comment on the website to allow individual consumers to comment on supplier’s behaviors and prices. However, various other state commissions have initiated formal actions involving retail electric and natural gas suppliers, many of whom operate in New York. It is reasonable to conclude that the Commission has not actively supervised or responded to

²⁵ PULP’s discovery in the pending Niagara Mohawk cases indicated that approximately 5,000 customers per month switch back to the utility.

customer complaints or evidence of violations and/or market abuse since it is highly unlikely that such conduct has not occurred during this time period. The Commission should proactively provide for consumer input about the conduct of marketers in New York

Conclusion

The Commission should undertake a wide range of reforms in its retail competition programs on behalf of residential customers including those recommended by AARP and PULP.

TESTIMONY OF WILLIAM D. YATES, CPA

FOR

PUBLIC UTILITY LAW PROJECT OF NEW YORK, INC.

[UNREDACTED VERSION]

Dated: August 31, 2012

1 **Q. PLEASE STATE YOUR NAME, ADDRESS, AND IDENTIFY FOR WHOM YOU**
2 **ARE PRESENTING TESTIMONY IN THIS PROCEEDING.**

3 **A.** My name is William D. Yates, and my office address is at Public Utility Law Project of
4 New York, Inc., P.O. Box 10787, Albany, NY 12201. I am presenting testimony in this
5 proceeding for the Public Utility Law Project of New York, Inc.

6 **Q. PLEASE DESCRIBE THE PUBLIC UTILITY LAW PROJECT OF NEW YORK,**
7 **INC. AND YOUR RELATIONSHIP TO THE ORGANIZATION.**

8 **A.** The Public Utility Law Project of New York, Inc., (“PULP”) is a New York not for profit
9 corporation. PULP was formed in 1981 to promote and defend the legal rights of utility
10 consumers, *inter alia*, by educating the public about rates for utility service, conducting
11 research on the legal rights of utility consumers, and litigation in the public interest with a
12 primary emphasis on the rights of low income utility consumers. I have been employed
13 by PULP in various capacities since July 1990. Currently, I oversee PULP's accounting
14 and financial systems, and I provide financial analysis and technical assistance in support
15 of PULP’s advocacy on behalf of residential utility and energy consumers.

16 **Q. WHAT IS YOUR EDUCATIONAL BACKGROUND, YOUR PROFESSIONAL**
17 **QUALIFICATIONS, AND YOUR EMPLOYMENT HISTORY?**

18 **A.** I am a graduate of Colgate University (B.A.) and a graduate of the New York University
19 Stern School of Business Administration (M.S. in Accounting). I am a Certified Public
20 Accountant (CPA), licensed to practice in New York State, and I am a member of the
21 American Institute of Certified Public Accountants (AICPA). I am familiar with software
22 applications and in the course of my work I write custom computer applications using

1 various languages. After completing my graduate work, I worked for several years in New
2 York City for a major accounting firm, Deloitte & Touche. After relocating to the
3 Albany area, in addition to my work for PULP, I have also worked as an independent
4 consultant to a variety of enterprises.

5 **Q. WHAT IS THE GENERAL PURPOSE FOR YOUR TESTIMONY?**

6 **A.** I am testifying regarding the utility bills of Niagara Mohawk’s customers who enter into
7 contracts for “commodity” (or “supply”) from energy services companies (“ESCOs”), in
8 contrast to what they would pay for full service from Niagara Mohawk. The evidence
9 available indicates that ESCO service is not providing a means for significant numbers of
10 customers to achieve significant utility bill savings. ESCO service is not making utility
11 bills more affordable, and is actually increasing utility bills for many of Niagara
12 Mohawk’s low-income customers. This indicates the need for Niagara Mohawk to
13 provide more information and better tools to enable its customers to assess the risks and
14 very limited or possibly nonexistent financial rewards that follow from signing ESCO
15 contracts. It also indicates a need for Niagara Mohawk to focus on other means to address
16 the affordability issues and to improve its low-income programs, as proposed by PULP
17 witness Barbara R. Alexander.

18 **Q. IS RELIABLE INFORMATION COMPARING ESCO COSTS WITH THOSE OF**
19 **TRADITIONAL UTILITY SERVICE FROM NIAGARA MOHAWK READILY**
20 **AVAILABLE TO CONSUMERS?**

21 **A.** The New York State Public Service Commission (“PSC” or “Commission”) at its website
22 advises the public that “[i]n a competitive market, electricity prices should be lower than

1 they would be under government regulation.... You as a consumer, and the state as a
2 whole, will benefit.... You could save money by shopping for lower cost power from an
3 ESCO. It is important to compare the prices offered by any supplier who sells electricity
4 and to know what you are signing up for.” *Energy Choices - The Facts from the PSC*
5 available at <http://www.dps.ny.gov/energychoices.htm> (Accessed August 31, 2012).

6 There is no reliable public information available of which I am aware to make the price
7 comparison urged by the Commission. The Commission does require ESCOs to report
8 their prices once a month, but intra-month changes need not be reported.¹ Comparing bills
9 which include ESCO charges with what Niagara Mohawk’s charges would be for full
10 service is not easy. I am not aware of any report or study addressing the factual question
11 whether Niagara Mohawk’s residential utility customers who switch to ESCOs actually
12 save money over time on charges for supply service.

13 **Q. PLEASE DESCRIBE THE INFORMATION PULP REQUESTED FROM NIAGARA**
14 **MOHAWK REGARDING ITS COMPARISON OF BILLS FOR CUSTOMERS WITH**
15 **ESCO SERVICE WITH BILLS FOR CUSTOMERS RECEIVING TRADITIONAL**
16 **BUNDLED NIAGARA SERVICE**

17 **A.** Niagara Mohawk initially was asked by PULP, in its Information Request 91 (“PULP IR-
18 91”), to provide "any internal analysis of whether residential customers receiving
19 commodity service from ESCOs whose charges are billed by Niagara Mohawk paid more

¹ "ESCOs may also continue to make offers to consumers at prices other than those reported.... Moreover, because reporting is limited to the price snapshots, ESCOs may promptly revise their offers after the snapshots are submitted...." Case 06-M-0647, et. al, *In the Matter of Energy Service Company Price Reporting Requirements, Order Adopting ESCO Price Reporting Requirement and Enforcement Mechanisms* (issued November 8, 2006).

1 or less than full (bundled) service customers for their electric or gas service for 2008
2 through 2011 and monthly for 2012 to date." In its IR-92, PULP asked a similar question:
3 whether Niagara Mohawk had analyzed whether its *low-income* customers who subscribe
4 to ESCO service paid more or less than they would have paid had they not switched from
5 Niagara Mohawk to an ESCO for supply service. Niagara Mohawk responded to PULP
6 IRs-91 and 92 with a report which showed the differences between Niagara Mohawk's
7 bills to customers who had bought supply from ESCOs and what their charges would have
8 been had the customer not switched to the ESCO, for two months: July and December
9 2011. That Responses showed, *inter alia*, for each ESCO, the "delta" (the difference,
10 positive or negative) by which the ESCO customers owed less or more to Niagara
11 Mohawk in comparison to what their bills would have been had they received full service
12 from the utility. More than a two-month sample of bill comparisons was needed, because,
13 as stated by Niagara Mohawk, "looking at single points in time cannot provide a
14 complete answer to the question of whether customers are paying more or less from taking
15 service from an ESCO. For a complete study, the period of time would need to reflect
16 multiple cycles and consider the terms of individual ESCo contracts with customers."
17 *Niagara Mohawk Response to PULP IR-91*. PULP then requested the most recent 24-
18 month history of the same type of data already provided for July and December 2011, in
19 PULP IR-107. The Retail Energy Supply Association ("RESA") then moved to bar
20 discovery of the data requested in PULP IR-91 and 107, arguing it is a trade secret and is
21 not relevant. The Administrative Law Judges ("ALJs") ruled it is relevant, and Niagara
22 Mohawk produced the two years' historical data in response to PULP IR-107 subject to a

1 confidentiality order, pending a later ruling on the confidentiality issue. The data
2 contained in the Response of Niagara Mohawk to PULP IR-107 is attached as Exhibit A.²

3
4 **Q. DOES THE INFORMATION PROVIDE DESCRIBE THE UTILITY BILLS OF ALL OF**
5 **NIAGARA MOHAWK'S RESIDENTIAL ESCO CUSTOMERS?**

6 It appears to be quite comprehensive. In PULP IR-90, PULP asked Niagara Mohawk
7 what percentage of its ESCO customers received separate bills from ESCOs and what
8 percentage received bills from Niagara Mohawk. Niagara Mohawk responded that

9 Based on the May 2012 Electric Migration Report, 99% (257,046) of Residential
10 Customers in NMPC are under the One Bill Purchase of Receivables Program.
11 Residential customers whose bills are sent separately by the ESCO are less than
12 1% (1,839) of total Residential Customers in Niagara Mohawk.

13
14 Based on the August 2012 Gas Migration Report, 99% (130,901) of Residential
15 Customers in NMPC are under the One Bill POR Program. Residential customers
16 whose bills are sent separately by the ESCO are less than 1% (1,240) of total
17 Residential Customers in Niagara Mohawk.

18
19
20 **Q. BASED ON THE INFORMATION CAN YOU DRAW A FIRM**
21 **CONCLUSION THAT ESCO SERVICE HAS NOT PROVIDED BILL**
22 **REDUCTIONS FOR NIAGARA MOHAWKS ESCO CUSTOMERS?**

23 **A.** To the extent that the data provided, which encompasses 24 consecutive months
24 (two years) of billing, is typical of any 2-year period of billing for the population
25 of Niagara Mohawk's ESCO customers, it is my firm conclusion that ESCO
26 service has not provided bill reductions for ESCO customers. In fact, the opposite

² This testimony and the exhibits to it are being filed confidentially, pending the decision on whether they will be made part of the public record of this proceeding.

1 is true: for both types of customers (low-income and regular), for both types of
2 service (electricity and gas), each and every total and average cost/savings metric
3 showed a disproportionately high extra cost associated with choosing ESCO
4 supply.

5 **Q. MORE SPECIFICALLY, WHAT DOES THE DATA PROVIDED BY**
6 **NIAGARA MOHAWK IN ITS RESPONSE TO PULP IR-107 REVEAL?**

7 **A.** The data attached to my testimony, received in response to PULP IR-107, shows:

8 For the 24 months August 2010 through July 2012, the data shows that
9 nearly all bills, 84.3% for electricity and 92.1% for gas, were higher for
10 those customers who had switched to ESCO service. Only 15.7% of
11 electricity bills and 7.9% of gas bills were lower.

12
13 For low-income customers, 91.5% of electricity bills and 93.4% of gas bills
14 were higher for those customers who had switched to ESCO service. Only
15 8.5% of electricity bills and 6.6% of gas bills were lower.

16
17 For regular (i.e., non low-income customers), 83.2% of electricity bills and
18 91.8% of gas bills were higher for those customers who had switched to
19 ESCO service. Only 16.8% of electricity bills and 8.2% of gas bills were
20 lower.

1 The data also shows that the net extra cost incurred by ESCO customers
2 over what they would be charged by Niagara Mohawk was \$101,775,321
3 for electricity and \$27,375,032 for gas. An estimated 207,842 customers
4 (84.3%) paid \$103,711,214 more for ESCO electricity service while an
5 estimated 107,225 customers (92.1%) paid \$27,931,488 more for ESCO
6 gas service.³

7
8 Only 38,579 of the total estimated 246,420 ESCO electricity customers
9 (15.7%) paid less using ESCO service (their total savings was \$1,935,893).
10 Only 9,249 of the total estimated 116,474 ESCO gas customers (7.9%) paid
11 less using ESCO service (their total savings was \$556,456).

12
13 For low-income ESCO customers, the net extra cost incurred over what
14 they would be charged by Niagara Mohawk was \$13,331,134 for electricity
15 and \$5,819,450 for gas. 30,195 (91.5%) of a total estimated 33,015 low-
16 income electricity customers paid \$13,442,926 more for ESCO service,
17 while 19,473 (93.4%) of a total estimated 20,840 low-income gas
18 customers paid \$5,905,789 more for ESCO service. Only 2,820 (8.5%) of
19 ESCO low-income electricity customers paid less using ESCO service
20 (their total savings was \$111,791). Only 1,367 (6.6%) of ESCO low-

³ Estimated customers are defined as follows: Estimated electricity customers = number of electricity bills from August, 2010 – July, 2012 divided by 24; Estimated gas customers = number of gas bills from August, 2010 – July, 2012 divided by 24.

1 income gas customers paid less using ESCO service (their total savings
2 was \$86,339).

3
4 For regular ESCO customers, the net extra cost incurred over what they
5 would be charged by Niagara Mohawk was \$88,444,187 for electricity and
6 \$21,555,582 for gas. 177,647 (83.2%) of a total estimated 213,406 regular
7 electricity customers paid \$90,268,288 more for ESCO service, while
8 87,752 (91.8%) of a total estimated 95,634 regular gas customers paid
9 \$22,025,699 more for ESCO service.

10
11 Only 35,759 (16.8%) of ESCO regular electricity customers paid less using
12 ESCO service (their total savings was \$1,824,101). Only 7,882 (8.2%) of
13 ESCO regular gas customers paid less using ESCO service (their total
14 savings was \$470,117).

15
16 The data also shows that, of the ESCO customers who had higher bills,
17 over 24 months the cumulative net average cost above what their bills
18 would have been had they not switched to ESCO service was \$413.02 for
19 electricity and \$235.03 for gas. Of those who experienced higher bills,
20 their average extra cost was \$498.99 for electricity and \$260.49 for gas.
21 Those with lower bills saved an average of \$50.18 for electricity and
22 \$60.16 for gas.

22

For low-income ESCO customers who had higher bills, over 24 months the cumulative net average cost above what their bills would have been had they not switched to ESCO service was \$403.79 for electricity and \$279.25 for gas. Of those who experienced higher bills, their average extra cost was \$445.21 for electricity and \$303.29 for gas. Those with lower bills saved an average of \$39.64 for electricity and \$63.16 for gas.

For regular ESCO customers who had higher bills, over 24 months the cumulative the net average cost above what their bills would have been had they not switched to ESCO service was \$414.44 for electricity and \$225.40 for gas. Of those who experienced higher bills, their average extra cost was \$508.13 for electricity and \$251.00 for gas. Those with lower bills saved an average of \$51.01 for electricity and \$59.64 for gas.

I prepared several charts and a summary table to illustrate the data provided in Niagara Mohawk's Response to PULP IR 107 relating to the experience of low-income customers with ESCO service. The charts and table I prepared are attached to this testimony as Exhibit B.

Q. WHAT DOES THE INFORMATION INDICATE REGARDING THE EXPERIENCE OF LOW-INCOME NIAGARA MOHAWK WHO SWITCHED TO ESCO SERVICE?

1 A. Many low-income customers tried ESCO service: there were an estimated⁴ 33,015
2 electricity and 20,840 gas customers from August 2010 – July 2012. Of those,
3 30,195 (91.5%) electricity and 19,473 (93.4%) gas customers paid more for their
4 supply, while 2,820 (8.5%) electricity and 1,367 (6.6%) gas customers paid less.
5 The cumulative average higher amount over 24 months was \$446.21 for electricity
6 and \$303.29 for gas, while the cumulative average lower amount over 24 months
7 was \$39.64 for electricity and \$63.16 for gas.

8 Additionally, low-income gas customers of ESCOs incurred higher extra costs
9 than when regular customers paid more by choosing gas service through an ESCO.
10 The cumulative average net extra cost of ESCO gas service for low-income
11 customers was \$279.25 compared to \$225.40 for regular customers.

12 **Q. ARE NIAGARA MOHAWK’S ESCO CUSTOMERS HAVING**
13 **DIFFICULTIES IN PAYING THEIR BILLS?**

14 A. In the months for which data is available, it is clear that for the vast majority
15 ESCO service is adding to customer bills, and is not alleviating hardship for low
16 income customers. PULP’s IRs sought information relating to Niagara Mohawk’s
17 collection activities, including those with respect to customers who buy unbundled
18 natural gas or electricity supply service from ESCOs. In its Response to PULP IR-
19 108, Niagara Mohawk indicated that its customers who bought from ESCOs were

⁴ Estimated customers are defined as follows: Estimated electricity customers = number of electricity bills from August, 2010 – July, 2012 divided by 24; Estimated gas customers = number of gas bills from August, 2010 – July, 2012 divided by 24.

1 sent 377,736 Final Termination Notices arising from non payment of charges in
2 2011, averaging 31,478 per month.

3 **Q. WHY WOULD SO MANY CUSTOMERS HAVING DIFFICULTY IN**
4 **MEETING PAYMENT OBLIGATIONS SWITCH TO A MORE COSTLY**
5 **SERVICE?**

6 **A.** I do not know. I surmise that many customers, at the time they switched to ESCO
7 service, may have had hopes of saving money. Switching to ESCOs is promoted
8 by the Commission, as previously mentioned. Under Niagara Mohawk's New
9 Choices® program, the public is advised that "[y]ou can receive a guaranteed 7%
10 discount on your gas or electric supply costs for a two-month introductory
11 period."⁵ After two months, the customer is switched to an ESCO price that is not
12 known when the contract is made, and contracts may have automatic renewal
13 windows after each year. Valid price and bill comparison information, however, is
14 difficult to obtain before taking ESCO service, and while taking ESCO service,
15 particularly at times when the customer has a contract option to switch back to full
16 utility service. Despite disclaimers that ESCO service does not guarantee savings,
17 customers faced with low, declining or static incomes, desperate for relief from
18 high utility bills, and encouraged not only by ESCOs but also by Niagara Mohawk
19 and the Commission, and lacking comparison information, may be optimistic
20 when they sign agreements to take ESCO service. According to Niagara
21 Mohawk's Response to PULP IR-101, a significant number of ESCO customers

⁵ http://www.nationalgridus.com/niagaramohawk/home/energychoice/4_details.asp

1 switch back to Niagara Mohawk full service, currently in the range of 5,000
2 electric customers per month and 2,000 gas customers per month, or a rate of more
3 than 84,000 per year. A professionally designed random survey of current and
4 former ESCO customers, conducted neutrally, might reveal more about why
5 customers switch to ESCO service in the first instance, and why so many change
6 their minds later. Further study could also reveal the extent to whether, despite
7 paying significantly more for ESCO commodity service, ESCO customers, and
8 particularly low-income ESCO customers are receiving countervailing value from
9 ESCO contracts that promise other benefits.

10 **Q. WHAT ARE THE IMPLICATIONS IF ESCO SERVICE IS NOT SAVING LOW-**
11 **INCOME CUSTOMERS MONEY ON THEIR UTILITY BILLS?**

12 **A.** If the Commission wants to alleviate the burdens of high utility prices on low-
13 income Niagara Mohawk customers, and the consequent impacts, there should be
14 less emphasis on shopping for competitive ESCO service and more emphasis on
15 actual bill reductions through reduced rates and energy efficiency measures
16 targeted to low-income customers, as those proposed by PULP witness Barbara R.
17 Alexander.

18 **Q. DOES NIAGARA MOHAWK HAVE BILL CALCULATORS AT ITS WEBSITE**
19 **TO FACILITATE PRICE COMPARISONS WITH ESCOS?**

20 **A.** No.

21 **Q. WHAT WOULD IT COST FOR NIAGARA MOHAWK TO HAVE BILL**
22 **CALCULATORS AT ITS WEBSITE TO FACILITATE COMPARISON OF WHAT**
23 **ITS BILLS WOULD BE WITHOUT ESCO SERVICE?**

1 A. I do not know. In response to PULP IR-108, Niagara Mohawk provided a “high
2 side” estimate that it could cost from \$400,000 to \$800,000 to begin calculating
3 Niagara Mohawk comparison bills. I agree that is on the high side. However, the
4 vast majority of Niagara Mohawk’s 264,000 residential electric ESCO customers
5 and 128,000 residential gas customers, many of whom can ill afford higher bills,
6 are losing many millions of dollars by shifting to ESCO service. A one-time cost
7 of developing online calculators to enable comparison of Niagara Mohawk’s bills,
8 and the cost of maintaining them may be small in contrast to consumer losses.
9 Also, it may be possible to fund website bill calculation functions using net profits
10 from Niagara Mohawk’s purchase of receivables program, which generates several
11 million dollars in added annual revenue to Niagara Mohawk.⁶

12 **Q. WHAT ARE YOUR RECOMMENDATIONS?**

13 A. The Commission and Niagara Mohawk have indicated in their messages to
14 customers that shopping for ESCO service can lead to savings. The Commission
15 also urges customers to compare prices. It is difficult to shop, however, when
16 prices are not available at meaningful times and actual bills cannot be compared.
17 More needs to be done to enable Niagara Mohawk customers to test whether
18 ESCO service is providing or will provide value to them. In addition to
19
20 recommendations made by PULP witness Barbara R. Alexander to promote better
21 awareness of ESCO pricing and comparisons, I recommend that Niagara Mohawk

⁶ See Niagara Mohawk’s Annual Report to the PSC for 2011, p. 42, indicating over \$3 million net revenue for ESCO Purchase of Receivables program. The Report does not itemize Niagara Mohawk’s revenues from purchasing gas receivables from ESCOs.

1 put a bill calculator on its website so that its full service bills could be more readily
2 compared with those given to customers with ESCO service.
